

## **state approved form and interior designer**

### **requirements:**

requirements to study form and interior design at the academy is a master in carpentry/cabinet making or a diploma as state approved wood engineer. During both the skills of sales business, educational teaching and practical/theoretical knowledge are taught. They build the necessary foundation of the practicum at the academy.

Courses at the academy of form and interior design provide skills in the field of design.

### **academic contents:**

The focus is how to develop creative and constructive solutions for design challenges. Key qualifications include the ability to work out details for customer needs. While working and experimenting with different forms, colours and materials, you learn how to figure out which are the best and get the right feeling for good design. Skills in free hand drawing, CAD drawing, rendering, picture processing and layouting enable us to present our ideas to customers and help contractors visualize our design.

Because of a good knowledge about a lot of different materials the right material can be chosen for every single case.
